FOREWARD

Coal is an excellent resource in terms of its stability of supply and its economic competitiveness. It is used as an extremely important energy resource as one of the constituents of Japan's best energy mix and also as a raw material in the iron & steel industry and etc.

The 1st Commitment Period of the Kyoto Protocol has already started and countries involved are urged to take urgent countermeasures mitigating global warming, and environmental consciousness of companies and general public has been increasingly heightened for coal use.

On the other hand, coal demand in the Asia-Pacific region has grown significantly and it is also expected that coal demand-supply situation will become tight in the future.

Under such circumstances, the CLEAN COAL DAY Executive Committee comprising 6 coal-related organizations is holding a special event to let you know the latest coal demand-supply situation and the role of coal toward climate change issues as well as how the Japanese coal industry should act, under the recognition that Japan's Clean Coal Technology will become the key to realization of the future Low Carbon society in light of the Government's announcement of Mid-term CO₂ emission target.

We hereby invite you to attend the Clean Coal Day in Japan 2009 event.
